GTA Industrial Portfolio Sealant Repairs and Replacements

Bentall Kennedy

Sealant repairs and replacements were completed at 33 industrial buildings in Oakville, Mississauga, Vaughan, Richmond Hill and Toronto.

The program involved visiting each site and meeting with the Property Manager to review issues and concerns and agree on a scope of work to meet the approved budget for each site. A visual evaluation of the existing facades at each building was completed. Design, specifications and tenders were developed. Construction review and contract administration services were completed for the repairs.
